

OnlineSim SSMHUB api v1

2020-06-03 14:55:00

A rewrite of the document that describes the API from smshub, you can use it, but the connection and configuration individually and you need to contact technical support to discuss some things with a connection to the API

General description

OnlineSim API provides you with the possibility to use our service in the automatic mode. For that purpose, you need to register on our site - onlinesim.ru and have to get an API key in the User Profile tab and to implement approximately the following operating procedure in the software:

1. Implement 2 methods and webhook. The method GET_SERVICES gives room for a certain number, after receiving SMS checks whether the purchased service and sends an SMS to webhook.
2. write to us by e-mail or telegram.

In order to use the API, you have to perform a POST or GET request via the HTTP protocol to the specified URL.

Common returned responses

The RESPONSE parameter values are common for all methods.

```
json {status: STATUS, ..., ... }
```

GET_SERVICES - get all numbers

URL - <http://smshub/>

This request get a list of online numbers.

Example

```
return {  
  countryList: [  
    {  
      country: "russia",  
      operatorMap: {  
        any: { vk: 10, ok: 25, wa: 52},  
        beeline: { vk: 10, ok: 15, wa: 20},  
        megafon: { vk: 0, ok: 10, wa: 32}  
      }  
    },  
    {  
      country: "ukraine",  
      operatorMap: {  
        life: { vk: 0, ok: 10, wa: 32},  
        any: { vk: 10, ok: 5, wa: 30},  
      }  
    }  
  ],  
  status: "SUCCESS"  
};
```

Parameters

Name of parameter	Parameter	Type of data	Description
action	required	STRUNG	action
key	required	STRUNG	apikey

list format

Name of parameter	Parameter	Type of data	Description/Value
status	required	STRUNG	request status SUCCESS or ERROR
countryList	required	ARRAY	Numbers list

countryList

Name of parameter	Parameter	Type of data	Description
country	required	STRING	country name. See country list
operatorMap	required	OBJECT	Numbers list Associative array of services: key - short name of the service value - the number of numbers for the service (type-int).

operatorMap

operator: {service: count, ...}

Name of parameter	Parameter	Type of data	Description
operator	required	STRING	operator name. See operator list
